

Mathematical Questions and Solutions in Continuation of the Mathematical Columns of the Educational Times Volume 43

Filesize: 2.54 MB

Reviews

*It is an awesome pdf i have possibly go through. It really is filled with wisdom and knowledge You will not really feel monotony at whenever you want of your time (that's what catalogues are for relating to in the event you ask me).
(Horace Schroeder)*

MATHEMATICAL QUESTIONS AND SOLUTIONS IN CONTINUATION OF THE MATHEMATICAL COLUMNS OF THE EDUCATIONAL TIMES VOLUME 43**DOWNLOAD**

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: .of their common tangents lie on a fixed nodal circular cubic having its node at O, its vertex at S, and its asymptote parallel to the axis of the parabolas, and at a distance $2SO$. Explain how there comes to be a definite locus when we have two variable parameters (the radius of the circle and the latus rectum of the parabola). The equation of the locus in 7866 is (1), referred to polar coordinates with S for pole, $r = c \tan i$ or $r = c \cot i$, which two equations represent the same curve; (2) referred to rectangular coordinates with O for origin, cular cubic is the inverse of a rectangular-hyperbola with respect to a vertex, and the pedal of a parabola with respect to the foot of the directrix. Generalized by Projection, the theorem is as follows: --A conic U is inscribed in a given triangle ABC so as to touch BC in a fixed point a, and a is the point on BC harmonically conjugate to a. On Aa is taken a fixed point O and a second conic V described touching OB, OC at B and C; prove that the points of intersection of common tangents to any two such conics lie on a fixed cubic having a node at O, touching Aa at A, passing through B, C, a, and whose tangent at a meets AO in a point which divides Oa harmonically to a. Also, explain how...
