

Treatise on Algebra

Filesize: 3.68 MB

Reviews

This is actually the very best publication i have read through till now. It is definitely simplistic but unexpected situations in the 50 % in the pdf. You can expect to like just how the article writer compose this pdf.

TREATISE ON ALGEBRA

Not Avail, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1852 Excerpt: . quantities a, b, c, d, e, f are in continued proportion. (212.) If four quantities are proportional, the product of the extremes is equal to the product of the means. Let $a : b :: c : d$. Then will $ad = bc$. For, since the four quantities are proportional, $a c = b d$. Multiplying each of these equals by bd , the expression becomes $abd = bed$ or $ad = bc$. Thus, if $3 : 4 :: 9 : 12$, then $3 \times 12 = 4 \times 9$. (213.) Conversely, if the product of two quantities is equal to the product of two others, the first two quantities may be made the extremes, and the other two the means of a proportion. Let $ad = bc$. Then will $a : b :: c : d$. For, since $ad = bc$ dividing each of these equals by bd , the expression becomes (214.) The preceding proposition is called the test of proportions, and any change may be made in the form of a proportion which is consistent with the application of this test. In order, then, to decide whether four quantities are proportional, we must compare the product of the extremes with the product of the means. Thus, to determine whether 5, 6, 7, 8 are proportional, we multiply 5 by 8, and obtain 40. Multiplying 6 by 7, we obtain 42. As these two products are not equal, we conclude that the numbers 5, 6, 7, 8 are not proportional. Again, take the numbers 5, 6, 10, 12. The product of 5 by 12 is 60, and the product of...
